

QUALITY. EFFICIENCY.

Our Occupational Health Clients have access to the resources of Community Healthcare System, the area's largest provider of healthcare in Northwest Indiana. Noted as one of the nation's Top 50 healthcare systems for quality and efficiency,* we draw upon the expertise of professionals setting the benchmarks for excellence in healthcare.

Together, **Community Hospital** in Munster; **St. Catherine Hospital** in East Chicago; and **St. Mary Medical Center** in Hobart offer the area's broadest scope of services and some of the most advanced diagnostic and therapeutic technology. It's all right here in Northwest Indiana.

Innovative programs such as our Joint Academy and same-day biopsy results, research trials for heart disease and cancer care, and a remarkable list of "firsts" to adopt new technologies distinguish the care our patients receive.

Since coming together in 2001, Community Healthcare System has invested more than \$100 million to improve facilities, expand services and add new technology at all three hospitals. We're committed to offering the very best healthcare to our patients, hardwiring excellence at every level of our organization.

* 2009 study by Thomson Reuters found Community Healthcare System has performed in the top 20 percent of healthcare systems nationwide for five measures of performance: mortality, complications, patient safety; length of stay and use of evidence-based practices.
